```
The invention relates to novel genes (ABA11004-ABA21534) and proteins (ABB14678-ABB18001) useful for preventing, treating or ameliorating medical conditions e.g. by protein or gene therapy. The genes are isolated from a range of human tissues disclosed in the genes are The nucleic acids, proteins, antibodies and (ant)agonists are useful in the diagnosis, treatment and prevention of: (a) cancer, e.g. breast and ovarian cancer and other cancers of the adrenal gland, bone, marrow, breast, gastrointestinal tract, liver, lung, or urogenital; (b) immune disorders e.g. Addison's disease, allergies, autoimmune haemolytic anaemia, autoimmune throughly cancer and other cancer of disease, allergies, cutoimmune disorders, neutoimmune thyroiditis, diabetes mellitus, Crohn's disease, multiple sclerosis, rheumatch arthritis and ulcerative collitis; (c) cardiovascular disorders such as myocardial ischaemias;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       3043
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      (d) wound healing; (e) neurological diseases e.g. cerebral anoxia and epilepsy; and (f) infectious diseases such as viral, bacterial, fungal and parasitic infections.

Nucleic acids encoding human immune/hematopoietic antigen polypeptides, useful for preventing, diagnosing and/or treating cancers and metastasis -

Disclosure; SEQ ID NO 37020; 3071pp + Sequence Listing; English.

AMK54951 to AAK64702 encode the human immune/haematopoietic antigen (I) amino acid sequences given in AAM82170 to AAM91921. (I) have cytostatic activity, and can be used in gene therapy and vaccine production. (I) proteins and polynuclectides may be used in the prevention, diagnosis and treatment of diseases associated with inappropriate (I) expression. For example, they may be used to treat disorders associated with decreased expression by rectifying mutations or deletions in a patient's genome that affect the activity of (I) by expressing inactive proteins or to supplement the patients own production of (I). Additionally, (I) polynucleotides may be used to produce the secreted (I), by inserting the nucleic acids into a host cell and culturing the cell to express the

```
represent sequences used in the exemplification of the present invention.
                         diagnose and treat immune/haematopoietic-related diseases, especially cancers and cancer metastases of haematopoietic-derived cells. AAK64703 to AAK87694 represent human immune/haematopoietic antigen genomic sequences from the present invention. AAK54942 to AAK54950 and AAM82169
   protein. (I) proteins and polynucleotides may be used to prevent,

                                              Isolated polypeptide for treating, preventing and/ or prognosing disorders related to the musculoskeletal system including
```

9 The invention relates to novel genes (AAL34669-AAL37666) and proteins (ABB03087-ABB04109) associated with the musculoskeletal system useful for preventing, treating or ameliorating medical conditions e.g. by protein or gene therapy. The genes are isolated from a range of human tissues disclosed in the specification. The nucleic acids, proteins, antibodies and (ant)agonists are useful in the diagnosis, treatment antibodies and (ant)agonists are useful in the diagnosis, treatment and prevention of: (a) cancer, e.g. breast and ovarian cancer and other cancers of the adrenal gland, bone, bone marrow, breast, of astrointestinal tract, liver, lung, or urogenital; (b) immune discretive contents autoimmune thyroiditis, diabetes mellitus, Crohn's disease, multiple scalerosis, rheumatoid arthritis and ulcerative colitis; (a) wound help and allorders e.g. cerebral scheemias; (d) wound help colitish the colitish contents and epilepsy; (e) neurological diseases e.g. crebral anoxia and epilepsy; 2831 ggcggaggttgcagtgagccgagatcatgccactgcactctagcctggg-cgacagagca 2889 2594 tttctcacataaagaccttacttaggaggccagacgtggtggctcatgcctataatccca 2653 2654 gcactttgggaggccgaggctggcagatcgcttgagtgcaggagtttgagaccagcatgg 2713 2714 gcaacatggcgaaaccccatctctacaaaaata---caaaattaaccaggtgttgtggc 2770 2950 gtagaagtgatcagatatttatctgcataaataataaaaggtagaaagtaattcatatt 3009 cataaaattttctactttgggagacagaaaaatcatggaaatgttccttgaaaaatttt 3129 3130 attcagagatgaagccagaaggaactctgggttgaggagaaggcattggggagccagcgg 3189 587 707 767 647 printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published\_pct\_sequences. 348 tototocattttaaagatgaagaaacaggocgggcacaatggctaatgcctgtaatccca 407 467 768 aagaaaaaaaaaaagatg-----aaacagaggcagaaagactttacgtaaattgctcat 820 Indels 34; Gaps 408 gcactttgggaggctgaggccagaggccagaggtcgcttgagctcagagtttgagaccagcctgg 468 ataacatggcaaaaccctgtctctacaaaaaaaatacaaaaattagatgggtgtggc 528 atgcacctgtggtcccagctacttgggaggctaaggtgggaggatcgcttgagcccaggg 588 agtcaagtctacactgagccatgattggatcactgcactccagcctgggtagacagagca catgtggttgtcaagtttgaccccaaaacccaat------ttattgaccaaggtta ttetttgaetgaggeaagggggteegeteetgggeettgggetttagaaageteatet 3010 taagaaggaacaattggggtttcataactcatgaagagttaaatgagttcaaaagaggga healing; (e) neurological diseases e.g. cerebral anoxia and epile and (f) infectious diseases such as viral, bacterial, fungal and parasitic infections. Note: The sequence data for this patent did not form part of the DB 22; Length 23934; musculoskeletal cancers and also for testing and detection e.g. Example 2; SEQ ID NO 2536; 781pp + Sequence Listing; English. (HUMA-) HUMAN GENOME SCI INC

Ruben SM Rosen CA, Barash SC,

WPI; 2001-451937/48.

Isolated polypeptide for treating, preventing and/ or prognosing disorders related to the musculoskeletal system including musculoskeletal cancers and also for testing and detection e.g. diagnosis

Example 2; SEQ ID NO 2544; 781pp + Sequence Listing; English.

The invention relates to novel genes (AAL34669-AAL37666) and proteins (ABB03087-ABB04109) associated with the musculoskeletal system useful for preventing, treating or ameliorating medical conditions e.g. by protein or gene therapy. The genes are isolated from a range of human tissues disclosed in the specification. The nucleic acids, proteins, antibodies and (ant)agonists are useful in the diagnosis, treatment and prevention of: (a) cancer, e.g. breast and ovarian cancer and other cancers of the adrenal gland, bone, bone marrow, breast, gastrointestinal tract, liver, lung, or urogenital; (b) immune discorders e.g. Addison's disease, allergies, autoimmune haemolytic anaemia, autoimmune thyvoiditis, diabetes mellitus, Crohn's disease, multiple sclerosis, inheumatoid atthritis and ulcerative colitis; (c) cardiovascular disorders such as myocardial ischaemias; (d) wound healing; (e) neurological diseases e.g. cerebral anoxia and epilepsy; and (f) infectious diseases such as viral, bacterial, fungal and Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published\_pct\_sequences. parasitic infections.

(HUMA-) HUMAN GENOME SCI INC

Rosen CA, Barash SC, Ruben SM;

WPI; 2001-476224/51.

Isolated polypeptide for treating, preventing and, or prognosing disorders related to the respiratory system including respiratory cancers and also for testing and detection e.g. diagnosis -

Disclosure; SED ID No 777; 546pp; English.

AAS28161-AAS28764 represent genomic sequences encoding for novel human respiratory antigens.
Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published\_pct\_sequences. The present invention relates to the isolation of novel human respiratory antigens (AAU17685-AAU1975), and cDNA and genomic sequences encoding for these polypeptides. The sequences of the invention are useful for preventing, treating and/or prognosing disorders related to the respiratory system including throat disorders (e.g. vocal cord paralysis, tonsillitis, and laryngitis), lung disorders e.g. pneumonla, allergic disorders e.g. asthma, pleurisy, cystic fibrosis, emphysema, nose disorders and cancers of the respiratory tissues e.g. lung cancer. The polynucleotide sequences of the invention are useful in gene therapy and antisense therapy.

AAK54951 to AAK64702 encode the human immune/haematopoietic antigen (I)
amino acid sequences given in AAM82170 to AAM91921. (I) have cytostatic
activity, and can be used in gene therapy and vaccibe production. (I)
proteins and polynucleotides may be used in the prevention, diagnosis and
treatment of diseases associated with inappropriate (I) expression. For
example, they may be used to treat disorders associated with decreased
cexpression by rectifying mutations or deletions in a patient's genome
that affect the activity of (I) by expressing inactive proteins or to
supplement the patients own production of (I). Additionally, (I)
complement the patients own production of (I). Additionally, (I)
the nucleic acids into a host cell and culturing the cell to express the
protein. (I) proteins and polynucleotides may be used to prevent,
diagnose and treat immune/haematopoietic-related diseases, especially
concers and cancer metastases of haematopoietic antigen genomic
sequences from the present human immune/haematopoietic antigen genomic
sequences from the present invention. AAK54942 to AAK64703
concerts and cancer metastases of haematopoietic antigen genomic
sequences from the present invention. AAK54942 to AAK64703
concerts and cancer metastases of haematopoietic antigen genomic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       represent sequences used in the exemplification of the present invention
                                                                                                                                                                                                                                                                                                     Nucleic acids encoding human immune/hematopoietic antigen polypeptides, useful for preventing, diagnosing and/or treating cancers and metastasis -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Score 320.4; DB 22; Length 23934;

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

```
corresponding to the overlapping clone, as we submit sequences with only a small overlap as described above.

This sequence was finished as follows unless otherwise noted: all regions were either double-stranded or sequenced with an alternate chemistry or covered by high quality data (1.e., phred quality >- 30); an attempt was made to resolve all sequencing problems, such as compressions and repeats; all regions were covered by at least one plasmid subclone or more than one M13 subclone; and the assembly was confirmed by restriction digest. The following abbreviations are used to associate primary accession numbers given in the feature table with their source databases: Em:, EMBL; Sw:, SWISSPROT; Tr:, TREMBL; WP:, WORMPEPP; Information on the WORMPEPP database can be found at

Human DNA sequence from clone RP11-31J20 on chromosome 9, complete
sequence.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Tracey, A. Bubmission Submisted (01-UNW-2001) Sanger Centre, Hinxton, Cambridgeshire, CB10 1SA, UK. E-mail enquiries: humquery@sanger.ac.uk Clonerequest: clonerequest'@sanger.ac.uk
On Jun 8, 2001 this sequence version replaced gi:14272260.
During sequence assembly data is compared from overlapping clones. Where differences are found these are annoctated as variations together with a note of the overlapping clone variation annotation may not be found in the sequence submission
